Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Composition useful as substitute for plasma, comprises solution of saline and recombinant gelatin-like protein having colloid osmotic function.

Example 1; SEQ ID NO 2; 31pp; English.

The present sequence is the protein sequence of recombinant gelatin-like protein Hu-3. This is a trimer of human recombinant gelatin-like protein Hu-1 hDM48390. A claimed composition suitable as a substitute for plasma comprises a solution of saline and a protein having a colloid osmotic function. The protein is a recombinant gelatin-like protein with a molecular weight of at least 10 kDa and at most 50 kDa and an isoelectric point of less than 8. It is especially Hu-1 or Hu-deam ADM48393. The recombinant gelatin-like protein, or a dimer, trimer or tetramer of the protein, is useful as a plasma expander that has a lower clearance rate protein, is useful as a plasma expander that has a lower clearance rate clearance rate and which is less susceptible to proteolytic degradation than presently used gelatin derivatives. Recombinant gelatin-like proteins that are in essence free of hydroxyproline do not give rise to an immunological reaction with blood samples containing IgE antibodies. The gelatin-like proteins can be covalently attached to pharmaceutically

active compounds. After administration, the coupled medicament will not diffuse from the circulating blood into the interstituin. Clearance by liver and kidney will be kept to a minimum, ensuring a more constant plasma level of the medicament. Suitable medicaments include those involved in intervening blood clotting, vasodilation, function of erythrocytes, thrombocytes and leukocytes, immune responses, and blood levels of messenger molecules such as hormones.
                                                                                                                                                                                                                                                                                    61 GBAGLPGAKGLTGSPGSPGPDGKTGPPGPAGQDGRPGPPGPPGARGQAGVMGFPGPKGAA

Like polypeptide Hu-3, which has a molecular weight of approximately 54 kba and which contains multiple Gly Xaa-Yaa triplets. In an example from the invention, recombinant Hu-3 was immobilised on polystynene beads using a heterobifunctional crosslinking agent, and used in a spinner flask cell culture. A claimed process for the preparation of a cell culture support comprises the step of coating a microcarrier bead with gelatine or gelatine-like protein having a molecular weight of about 40-200 kba, and optionally further comprising the step of immobilising the gelatine or gelatine-like protein on the microcarrier. In this process, of the gelatine or gelatine-like protein has the same molecular weight. The gelatine or gelatine-like protein is recombinantly produced to obtain a material of uniform molecular weight and to reduce the risk of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Preparing cell culture support useful for culturing anchorage dependent cells, involves coating microcarrier bead with gelatine or gelatine-like protein having specific molecular weight.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     present sequence is the protein sequence of human recombinant

gelatin

The present sequence is the protein sequence of recombinant gelatin-like protein Hu-1 Any48390. A claimed composition suitable as a substitute for protein Hu-1 Any48390. A claimed composition suitable as a substitute for plasma comprises a solution of saline and a protein having a colloid composition. The protein is a recombinant gelatin-like protein with a molecular weight of at least 10 kPa and at most 50 kDa and an cost 50 kDa and an coupled and compounds. The protein, or a dimer, trimer or compounds. The proteins can be covalently attached to continue the coupled antibodies. The gelatin-like proteins can be covalently attached to pharmaceutically active compounds. After administration, the coupled medicament will not diffuse from the circulating blood into the circulating a more constant plasma level of the medicament. The specification describes a method for the incorporation of non-natural amino acid into a polypeptide. The method comprises reacting at least one 3,4-dehydroprolle residue in the polypeptide with an epoxidation reagent from a polypeptide containing at least one 3,4-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Incorporating non-natural amino acid into polypeptide, useful e.g. for production of bloadhesives, by epoxidation or substitution of dehydroproline residues.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The specification describes a method for producing an extracellular matrix procein or its fragment. The extracellular matrix procein is capable of self aggregating in a cell which does not ordinarily hydroxylated prolines. The method comprises optimising a nucleic acid sequence for expression in the cell by substitution of codons preferred by the cell for naturally occurring codons not preferred by the cell; incorporating the nucleic acid sequence into the cell; and contacting the cell with a hypertonic growth medium containing at least one amino acid, selected from the group consisting of trans-4-hydroxyproline and 3-hydroxyproline to allow at least one of the amino acids to be assimilated into the cell and incorporated into the extracellular matrix protein. The method may be used to make host cells assimilate and incorporate trans-4-hydroxyproline into proteins. This is especially useful in the recombinant production of proteins such as collagen, fibringen and fibronectin whose ability to self aggregate and produce functional proteins depends on the post translational hydroxylation of proline. The method is also useful in studying the structure and function of polypeptides which do not normally contain trans-4-hydroxyproline. The presents requence represents human collagen is alphatoal region, which may be accenting the presents of proceins and function of presents enemethod is also useful in studying the structure and function of presents enemethod is also useful in studying the structure and function of presents enemethod is also useful in studying the structure and function of presents enemethod is also useful in studying the structure and function of presents and produce function of the post translate the sequence of the post in the post of the p

epoxyproline residue. The method is used for studying the effects of non-natural amino acids on structure and function of polypeptides. The method is also useful for commercial production of collagen or mussel adhesive proteins (which are useful as bioadhesives), and for incorporating a wide variety of groups, including therapeutic ligands and biological probes, into polypeptides 8888888888

Claim 24; Fig 18; 260pp; English

The specification describes a method for producing an extracellular matrix protein or its fragment. The extracellular matrix protein is capable of self aggregating in a cell which does not ordinarily hydroxylated prolines. The method comprises optimising a nucleic acid sequence for expression in the cell by substitution of codons preferred by the cell for naturally occurring codons not preferred by the cell; incorporating the nucleic acid sequence into the cell; and contacting the nucleic acid sequence into the cell; and contacting the cell with a hypertonic growth medium containing at least one amino acid, selected from the group consisting of trans-4-hydroxyproline and 3-hydroxyproline to allow at least one of the amino acid, cellected from the group consisting of trans-4-hydroxyproline and 3-hydroxyproline into proteins. This is especially useful in the recombinant production of proteins such as collagen, fibrinagen and recombinant production of proteins such as collagen, fibrinagen and proteins depends on the post translational hydroxylation of protein protein also useful in studying the structure and functional protein sequence represente a chimment collagen 1 (alpha)/decorin protein, which may be produced using the method of the invention

| PR 09-OCT-1998; 98US-00169768.  XX X | The specification describes a method for producing an extracellular matrix protein or its fragment. The extracellular matrix protein is capable of self aggregating in a cell which does not ordinarily hydroxylated prolines. The method comprises optimising a nucleic acid expression in the cell by substitution of codons preferred by that cell for naturally occurring codons not preferred by that cell for naturally occurring codons not preferred by that cell for naturally occurring codons not preferred by that cell for naturally occurring codons not preferred by that cell for naturally occurring codons not preferred by the cell.  C coll with a hypertonic growth medium containing at least one amino acid, cell with a hypertonic growth medium containing at least one amino acid, cell with a hypertonic growth medium containing at least one amino acid, collito the cell and incorporated into the extracellular matrix protein. The method may be used to make host cells assimilate and incorporate trans-4-hydroxyproline into proteins. This is especially useful in the cecombinant production of proteins such as collagen, fibrinogen and fibronectin whose ability to self aggregate and produce function of proteins depends on the post translational hydroxylation of proline. The present sequence represents climenic collagen 1 (alpha1)/transforming corporate translational trans-4-hydroxyproline. The present sequence represents climenic collagen 1 (alpha1)/transforming companies which of the invention.  XX Sequence 1171 AA; | a de se                       |

```

The invention relates to the production of mammalian collagen in plants. CC clones: alpha3 and alpha22, spanning the human collagen type I gene were isclated from a NG-63 osteosarcoma library. Clone alpha3 contained 53 by of the 5' untranslated region and the first 1920 by of coding consequence conceding amino acids are 2 clones were used to generate a number of fragments which were used to generate a number of fragments which were used to construct composite sequences encoding variant collagen molecules. The fragments are: (A) containing nucleotides (In) - 4 to 479; (B) containing cc fragments are: (A) containing nucleotides (In) - 4 to 479; (B) containing cc fragments are: (A) containing nucleotides (In) - 4 to 479; (B) containing cc fragments are: (A) containing nucleotides (In) - 4 to 479; (B) containing cc fragments of the sequence encoding the PRS (pathogenesis-related companies) of the sequence encoding the PRS (pathogenesis-related companies) of the central helicoidal and bases 66.77 from the sequence encoding the CC the amino propeptide domain (In 72-479); (D) all of the amino-telopeptide commin (In 474-534) and the N-terminus of the helicoidal region (In 535-cd and In) (E) the Draill Flammil fragment (1709-2808) of alpha22, encoding as 936-1192 in the central helicoidal domain creding as 1931-1444 in the C-propeptide domain; (G) the C-terminus of the C-terminus of the Cr propeptide domain; (G) the C-terminus of the C-terminus of the C-terminus of an al 193-1444 in the C-propeptide domain; (G) the C-terminus of the C-terminus of cencoding as 1343-1401 and also including the KDEL morif for retention in the ER. This sequence represents a recombinant thuman collagen; (F) and (G). Cr plant cells. The transformed plants; microcapsules for cardiac values, guide compositions (e.g. as prostheses for cardiac valves, ligaments of themostatic operation, adontological, cosmetic and bioechnological compositions (e.g. as prostheses for cardiac valves, ligaments of cuttered to collagen dystunction produced from the p

Also claimed are a vector comprising the nucleic acid sequence. Also comprising the vector, a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain and a kit to perform the method, an array, a method for identifying an agent that increases or decreases the expression of the polymucleotide sequence that is differentially expressed in neuronal tissue of a first animal subjected to pain, a method for identifying a compound which regulates subjected to pain, a method for identifying a differentially expression of a polymucleotide sequence which is differentially expression of a polymucleotide sequence which is differentially expressed in an animal subjected to pain, a method for identifying a compound that regulates the activity of one or more of the polymucleotides, a method for producing a pharmaceutical composition, a

method for identifying a compound or small molecule that regulates the activity in an animal of one or more of the polypeptides given in the specification, a method for identifying a compound useful in treating pain and a pharmaceutical composition comprising the one or more polypeptides or their antibodies. The polynucleotide or the compound that modulates its activity is useful for preparing a medicament for treating pain (e.g. spinal segmental nerve injury (Chung), chronic constriction injury (CXI) and spared nerve injury (CNII) in an animal (e.g. gene the specification) which is differentially expressed during pain. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic form directly from WIPO at ftp.wipo.int/pub/published_pot_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 998 GPMGPPGLAGPPGESGREGAPGAEGSPGRDGSPGAKGDRGETGPAGPPGAPGAPGAPG 1057

The invention discloses a composition comprising two or more isolated rate or human polynucleotides or a polynucleotide which represents a fragment, derivative or allelic variation of the nucleic acid sequence. Also claimed are a vector comprising the nucleic acid sequence. Also claimed are a vector comprising the nucleic acid sequence. Also comprising the vector, a method for identifying a nucleotide sequence which is differentially respressed in an animal subjected to pain and a kit to perform the method, an array, a method for identifying an agent that increases or decreases the expression of the polynucleotide sequence that is differentially expressed in method for identifying a compound which regulates the expression of a polynucleotide sequence which is differentially expressed in an animal subjected to pain, a method for identifying a compound that regulates the activity of one or more of the compound that regulates the activity of an one of the polynucleotides the activity of one or more of the pain and a pharmaceutical composition, a method for identifying a compound useful in treating pain and a pharmaceutical composition comprising the one or more oppolypeptides or their antibodies. The polynucleotide or the compound that compound that is useful for preparing a medicament for treating pain (e.g. spinal segmental nerve injury (SNI)) in an animal (e.g. gene the sequence data for this patent did not form pair of the printed the specification) but was obtained in electronic form directly from WIPO at the contact of the printed for the printed for the contact of the printed for the contact of 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New composition comprising two or more isolated polypeptides, useful for preparing a medicament for treating pain in an animal.
                                                                                                                                                                                                      Human, pain, neuronal tissue, gene therapy,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      임
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention discloses a composition comprising two or more isolated rate or human polynucleotides or a polynucleotide which represents a fragment, derivative or allelic variation of the nucleic acid sequence. Also claimed are a vector comprising the nucleic acid sequence. Also claimed are a vector comprising the nucleic design a nucleotide sequence which is differentially regulated in an animal subjected to pain and a kit to perform the method, an array, a method for identifying an agent that increases or decreases the expression of the polynucleotide sequence that is differentially expressed in neuronal tissue of a first animal subjected to pain, a method for identifying a compound which regulates the expression of a polynucleotide sequence which is differentially expressed in an animal subjected to pain, a method for identifying a compound that regulates the activity of one or more of the polynucleotides, a method for producing a pharmaceutical composition, a method for identifying a compound or small molecule that regulates the activity in an animal of one or more of the polypeptides given in the activity in an animal of one or more of the polypeptides given in the paint and a pharmaceutical composition and a pharmaceutical composition of a pharmaceutical composition, a method for identifying a compound useful in the activity in an animal of one or more of the polypeptides given in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         12;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          577
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        pain and a pharmaceutical composition comprising the one or more polypeptides or their antibodies. The polynucleotide or the compound that modulates its activity is useful for preparing a medicament for treating pain (e.g. spinal segmental nerve injury (Chung), chronic constriction injury (CCI) and spared nerve injury (SNI)) in an animal (e.g. gene therapy). The sequence presented is a human protein (shown in Table 2 of the sequence acts of the securing pain. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic form directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      168

The present sequence is porcine alphal(I) collagen. The present invention relates to recombinant synthesis of collagens and gelatins derived from animals. Collagen is useful in medical, pharmaceutical, food and cosmetic industries. Collagen is useful in medical, pharmaceutical, food and cosmetic incontinence implants, and for treating autoimmune disorders such as submitted arthritis. Collagen is useful in food products such as sausage casings, and in cosmetics or facial and skin products such as sausage animatoid arthritis. Collagen is useful in food products such as sausage casings, and in cosmetics or facial and skin products such as monitaring viral infections, autoimmune diseases and cancer. Gelatin is useful in the manufacture or as a component of various pharmaceutical and medical devices and products, in food and beevrage industries, in hair manufacturing processes, as a glue or adhesive in various manufacturing and photographic application; in laboratory application, and as a component in various gels used for biochemical and electrophoretic analysis, including enzymographic gels
  and for treating autoimmune disorders, infections and cancer.
                                                       Example 3; Fig 8; 168pp; English.

New pancreatic specific nucleic acid molecule or protein for diagnosing, staging, imaging, monitoring, preventing or treating pancreatic cancer or non-cancerous disease states of the pancreas.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   This invention relates to novel nucleic acids and proteins present in normal and neoplastic pancreatic cells. Pancreatic cancer is a common cause of cancer death worldwide, therefore accurate methods of diagnosis and treatment are required. Compounds which modulate the proteins of the invention may have cytostatic activity and the protein and DNA sequences of the invention may be useful for the development of a vaccine or in gene therapy. The composition and methods are useful in diagnosing, astgaing, monitoring, preventing or treating pancreatic cancer and non-cancerous disease states of the pancreas. The present sequence is that of a human pancreatic protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            109 GVMGFPGPKGAAGEPGKAGERGVPGPPGAVGPAGKDGEAGAQGPPGPAGPAGFRGEQGPA 168

```

The invention discloses a method for stimulating or inhibiting cell growth and/or division which comprises contacting or inserting into an animal cell a polypeptide comprising one of the dear antler cartilage cell (DACC) clones disclosed. More particularly, the method relates to these polypeptides capable of stimulating mesenchymal cell growth and/or division and to transferding these cells and chondrocytes with vectors carrying the genes of these polypeptides capable of stimulating chondrogenesis, osteogenesis, growth, repair, regeneration and/or restoration of the extracollular matrix. The chondrocytes selectively express genes required to form a cartilaginous matrix. The Cholypeptides and polynclectides are useful for identifying an agent that modilates the activity of the polypeptide, for stimulating mesenchymal cell growth and/or division by exposing animal mesenchymal cells to conditioned media or its active fraction, obtained from dear antler cartilage cells, for inhibiting cell growth and/or division by inserting into an animal cell, a compound which inhibits the translation of the polywoleotide encoding the DACC. The method and the polypeptides are useful for stimulating mesenchymal cell cor connective tissue growth, repair, regeneration and/or restoration in an animal. The polymucleotides, polypeptides, agonists and antagonists car animal. The polymucleotides, polypeptides, agonists and antagonists collectify other proteins, which bind to or interact with the polymored in modulating cell growth and/or division.

The sequences presented in ABG93921-ABG99948 are the proteins encoded by the DACC CDNA clones 514 GPKGSPGEAGRPGEAGLPGAKGLTGSPGSPGPDGKTGPPGPAGQDGRPGPPGARGQA 108 575 GVMGFPGPKGAAGEPGKAGERGVPGPPGAVGPAGKDGEAGAQGPPGPAGPAGERGEQGPA 634 754 Stimulating or inhibiting cell growth and/or division, useful for stimulating chondrogenesis, cartilage, disc or connective tissue growth, repair, and/or regeneration, comprises administering deer antler |||| GPPGPAGEEGKRGARGEPGPTGLPGPPGERGGPGSRGFPGADGVAGPKGPAGERGSPGPA 515 GPKGSPGBAGRPGBAGLPGAKGLTGSPGSPGPDGKTGPPGPAGQDGRPGPPGARGQA GANGAPGNDGAKGDAGAPGAPGSQGAPGLQGMPGERGAAGLPGPKGDRGDAGPKGADGSP GVMGFPGPKGAAGEPGKAGERGVPGPPGAVGPAGKDGEAGAQGPPGPAGPAGERGEQGPA GSPGFQGLPGPAGPPGEAGKPGEQGVPGDLGAPGPSGPAGE------PGP---GSPGFPGGLPGPPGBAGKPGBQGVPGDLGAPGPSGARGBRGFPGBRGVQGPPGPAGPR -----TGLPGPPGERGGPGSRGFPGADGVAGPKGPAGERGSPGPAGPKGSP GE-----AGRPGEAGLPGAK-----GLTGSPGSPGPDGKTGPPGPAGQDGRP 1 GPP------GEPGPIGLPGPPGERGGPGSRGFPGADGVAGPKGPAGERGSPGPA Length 1461; Indels 64.0%; Score 2233.5; DB 5; 153; Pred. The polypeptides can be used as molecular weight are used to identify compounds which bind to the polypeptides are used to identify compounds which bind to the polypeptides of the invention are used as probes and primers, for sequencing, for chromosome or gene mapping, in the production of recombinant proteins, and in generating anti-sense DNA or RNA and in gene thensapy. Polypeptides of the invention can be used to target drugs to a tumour, in assays to determine biological activity, to raise antibodies/elicit an immune response, to determine quantitative protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            immunomodulatory; cytostatic; neuroprotective; vulnezary; nootropic; anticonvulsant; antiarthritic; cerebroprotective; antifungal; antiviral; antibacterial; antiallergic; dermatological; haemostatic; antiasthmatic; thrombolytic; immunogen; antibody; gene therapy; neurological disorder; Parkinson's disease; inflammatory disorder; cancer; asthma; osteoporossis; tissue regeneration; immune disorder.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 18, Application US/09548608

Sequence 18, Application US/09548608

Patent No. 6355422

GENERAL INFORMATION:
GENERAL Sende, Martin

APPLICANT: Goide, Martin

TITLE OF INVENTION: A Method for Assaying Collagen Fragments

TITLE OF INVENTION: Method and Use of the Method to Diagnose the Presence of TITLE OF INVENTION: Disorders Associated with the Metabolism of CORRESPONDENCE ADDRESS:
ADDRESSEE: Darby & Darby PC

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 20, Application US/09500811
Patent NO. 61231314
GENERAL INFORMATION:
APPLICANT: Ovist, Per
APPLICANT: Bonde, Martin
TITLE OF INVENTION: A Method for Assaying Collagen Fragments
TITLE OF INVENTION: in Body Fluids, A Test Kit and Means for
TITLE OF INVENTION: Method and Use of the Method to Diagnose of TITLE OF INVENTION: Disorders Associated with the Metabolism on NUMBER OF SEQUENCES: 21
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 STATE: New York
